SUMMARY

Information Technology student at President University seeking an internship in AI engineering, web development, or data analysis. Built the AI pipeline for an on-premise computer vision inspection system as an AI Engineer, and fine-tuned transformer models for news summarization and named entity recognition. Skilled in Python, PyTorch, OpenCV, C++, SQL, and web development with Next.js and FastAPI.

EDUCATION

President University Bekasi, West Java
Bachelor's Student in Information Technology *Aug. 2024 – Present*
- **GPA:** 3.80/4.00 | **Relevant Coursework:** Artificial Intelligence, Machine Learning, Web Development

PROJECT EXPERIENCES

VeriVision | *Python, YOLOv8, PyTorch, MobileSAM* July 2026
- Led the AI development of a visual inspection platform for Astra Otoparts in a team of 3, building an inference pipeline with YOLOv8 for object detection and MobileSAM for segmentation.
- Built a training workflow that accepts multiple labeled datasets and trains models without code changes, reaching over 80% accuracy on most inspection use cases.
- Ingested real-time IP/RTSP camera streams from automotive production lines for continuous model evaluation, and restructured the inspection engine into a configuration-driven architecture so new use cases deploy through database configuration.
- Delivered a working on-premise demo that displays real-time pass/fail verdicts with model confidence scores.

Automatic Trash-Collecting Robot | *C++, Arduino IDE* April 2026
- Contributed to a 5-person team building an Arduino Uno robot that combines a 4-servo acrylic hand with a mobile chassis using two types of sensors for autonomous trash collection.
- Assembled the mechanical hand components and programmed its motion control algorithm in C++ using the Arduino IDE.
- Calculated movement coordinates to guide the robot from its starting position to trash locations and disposal sites.
- Achieved 7 of 10 successful end-to-end pick-and-place trials, integrating mechanical design, embedded programming, and motion control.

Intelligent Hybrid News Summarization and NER System | *Python, Google Colab* February 2026
- Fine-tuned DistilBART, DistilBERT, and T5 for abstractive news summarization on the CNN/DailyMail dataset, and RoBERTa-base for Named Entity Recognition (NER) on CoNLL-2003.
- Identified DistilBART as the best summarization model, with a ROUGE-1 F1 of 0.3742 and ROUGE-L of 0.3127.
- Trained an NER model that identifies locations, organizations, and persons, achieving a weighted F1-score of 0.978 and 97.7% accuracy.

Presdorm | *PHP, MySQL, JavaScript* May 2025
- Developed a prototype dormitory management website in a team of 4 for a first-year final project, with separate admin and resident/student roles.
- Led frontend development, focusing on user interface and user experience.
- Presented the system to the Dormitory Director in a demo and meeting, generating interest in implementing it.

LEADERSHIP ACTIVITIES

Mahasiswa Penggerak (Kampus Merdeka support organization) – Education Department President University
Vice Project Manager (VPM) *October 2024 – July 2025*
- Led a 30-member committee to plan and execute an education seminar, "Pursuing Career Opportunities Abroad."

CERTIFICATIONS

English Vocational Training: Junior Administrative Assistant, *Ministry of Manpower, Indonesia* June 2025
Data Analysis Camp Batch 1, *Ousean Indonesia & Data Analyst Camp* | Score: 90/100 Feb 2025
Certificate of Appreciation (TOEFL Test) | Score: 600 Feb 2025

SKILLS & LANGUAGES

Programming Languages: Python, C++, JavaScript, PHP, SQL, HTML/CSS
AI & Data: PyTorch, OpenCV, YOLOv8, MobileSAM, Pandas, NumPy
Web & Databases: Next.js, FastAPI, Tailwind CSS, MySQL
Developer Tools: VS Code, Android Studio, Google Colab, Git, GitHub
Soft Skills: Problem Solving, Adaptability, Teamwork, Attention to Detail, Willingness to Learn, Initiative
Spoken Languages: Indonesian (Native), English (Professional Working Proficiency), Japanese (Basic)
