SUMMARY

Informatics student with experience in software development, machine learning, embedded systems, and web development through academic and organizational projects. Well-versed in Python, C++, web technologies, and AI-based solutions, with hands-on experience in developing NLP models, robotic systems, and user-focused applications. Interested in applying technical skills to solve real-world problems and continuously improving through practical projects.

EXPERIENCE

Case Study Developer

02/2026 - 06/2026

TechSprint, PUMA IS

- Developed the case study and judging rubric for the UI/UX Design track of TechSprint, a multi-track competition (System Analyst, Data Automation, UI/UX Design) challenging participants with real-world problem-solving scenarios.
- Collaborated with judges to align case study criteria with assessment standards, ensuring fair and consistent scoring throughout the competition.
- Contributed to an event that attracted 10 registered teams overall, with 8 teams competing on D-Day.
- Helped guide 3 teams in the UI/UX Design track through to final judging and scoring.

Embedded Systems Engineer - (Project)

02/2026 - 04/2026

Automatic Trash-Collecting Robot

- Designed and built a robotic arm system using an Arduino Uno microcontroller, combining a custom acrylic robotic hand with a mobile chassis to autonomously locate, grab, and dispose of small trash items.
- Assembled the robotic hand and developed the motion control algorithm in C++ using the Arduino IDE.
- Enabled precise movement from a starting position to the target trash location and final disposal coordinates.
- Achieved reliable end-to-end pick-and-place functionality, demonstrating integration of mechanical design, embedded programming, and motion control.

Machine Learning Engineer - (Project)

01/2026 - 02/2026

Intelligent Hybrid News Summarization and Named Entity Recognition System

- Built and fine-tuned multiple transformer-based models in Python using Google Colab, including DistilBART, DistilBERT, and T5 for abstractive news summarization, and RoBERTa-base for Named Entity Recognition (NER).
- Developed the summarization models to extract concise, relevant summaries from news articles, with DistilBART achieving the strongest performance (F1-score of 0.3742, ROUGE-L of 0.3127).
- Implemented the NER model to identify entities such as locations, organizations, and persons, achieving a weighted F1-score of 0.978 and overall accuracy of 97.7%.
- Demonstrated strong capability in NLP model fine-tuning, evaluation, and comparative performance analysis.

Freelance Resume Reviewer

10/2025 - 11/2025

ICC, President University

- Conducted comprehensive evaluations of 500+ President University student resumes over a one-month period as freelance support.
- Reviewed submitted resume drafts to identify formatting issues, content gaps, and alignment with industry standards.
- Revised sections and provided targeted recommendations to improve clarity, structure, and professional impact.
- Delivered polished resume outputs with actionable feedback to enhance students' job application readiness.

- Developed a prototype website called Presdorm, a management system for President University's dormitory, using PHP, JavaScript, CSS, and MySQL.
- Primarily responsible for frontend development, focusing on user interface and user experience.
- Successfully attracted the interest of the Dormitory Director for potential future implementation.

EDUCATION

Information Technology09/2024 - Present
President Uiversity - Candidate for Sarjana Komputer (S.Kom.)

- President University Jababeka Scholarship Rank 2.

CERTIFICATES

Data Analysis Camp Batch 1

English Vocational Competency Based Training Junior Administrative Assistant Training Program

SKILLS

Web Development: Frontend Development, Prototyping	Soft Skills: Problem Solving, Team Collaboration, Communication
Programming Languages: Python, C++, HTML/CSS, MySQL,	Basic

LANGUAGES

English	Intermediate	Indonesia	Native
Japanese	Basic
